

Creating 360 degree Virtual Tour by using H5P

Dr. Yash Paul Sharma

- A virtual tour is a simulation of an existing location, usually composed of a sequence of videos or still images.
- It may also use other multimedia elements such as sound effects, music, narration, and text.

- A **360-degree virtual tour** is a collection of several **panoramic** images that are seamlessly stitched together to give the viewer a **360°** view of the location.
- It includes a sequence of videos or still images, so people can view an entire area without having to be physically present.

- Normal image

- Panoramic 360 degree image

- 360 degree Virtual Tour can be a video or combination of images that are stitched together.
